SHAW-WALKER work-organized counters

Space-Saver Step-Saver Teller Stations

all made from
Stock Under-Counter Units

Drawing on our experience gained during the past 60 years, Shaw-Walker has developed new means of saving floor space and speeding depositor service.

Shaw-Walker's complete family of Step-Saver Module Teller Stations are composed of stock under-counter units. All are adaptable for *architect-designed** counter tops and fronts in units of 60-inch modular arrangements. Also available with Shaw-Walker stock counter tops and fronts.

Because of Shaw-Walker know-how, plus years of experience in design and production of every type banking equipment, we can be most helpful in *transforming the architect's creative ideas* into counters and work spaces that are efficient, compact and attractive.

**Architect-Designed—See Houston, Texas picture on preceding page. Allentown and Muskegon pictures show stock fronts and tops. For other pictures and facts get our 36-page bank handbook and 244-page general catalog described on page 4 of this insert.*

Typical Under-Counter Units for Savings Tellers and Commercial Tellers

The two typical counter sections illustrated are enclosed with architect-designed wood fronts, and finished tops of grained laminate with marble deal plates. The steel under-counter equipment is assembled from Shaw-Walker's stock units.

Across on the opposite page, at left, is line drawn illustration of the stock units. At the extreme right are plans and sections giving detailed dimensions.

SAVINGS TELLERS COUNTER—This 10-foot Module is widely used for Savings Tellers. Two Tellers share savings machine. Machine is usually on a portable stand.

The stock steel units: ① Two, Teller Cabinets No. 9107-1; ② Two, Knee-Spaces No. 9130; ③ Two, Leg Units No. 9133 with Foot Rails No. 9138; and ④ One Machine Opening No. 9127. Top drawer of Teller Cabinets has three lift-out Trays, two for currency and one for checks and debit and credit slips. (Three of our nine stock Teller Cabinets are pictured on page 4.)

COMMERCIAL TELLERS COUNTER—Here's the most commonly used work-organized step-saver for Commercial Tellers. Pictured are two, 5-foot Modules with "Returns." These counters are often used in a straight line, without the "Return."

The stock steel units in first Module: Teller Cabinets, ① No. 9106 and ② No. 9108; ③ Knee-Space No. 9131 with Pigeon Hole Unit No. 219. Second Module is the same except Teller Cabinets are ④ No. 9107 with five box drawers and ⑤ No. 9109 Cupboard with No. 9110 Cutout Top for NCR Receiving Machine.

SAVINGS TELLERS

COMMERCIAL TELLERS

SPECIFICS FOR DESIGNING

Under-Counter Equipment is made in two depths— $22\frac{1}{8}$ " and $27\frac{1}{8}$ ". If the counter fronts and superstructures are standard units, furnished by Shaw-Walker, the $27\frac{1}{8}$ " units are used.

For counter fronts and superstructures designed by the architect and furnished by others, the $22\frac{1}{8}$ " depth units are required to allow clearance for counter construction.

Shaw-Walker steel under-counter equipment is standard in 5-foot Modules and can be varied to fit any requirement.

Being sectional, the equipment is easy to install, to expand or to rearrange. All stock units are interchangeable.

Under-Counter Teller Cabinets are made in nine stock models—See page 4 of this insert.

Counter Fronts and Superstructures can be wood, marble or metal. Surfaces of counter tops can be linoleum, laminate, marble or wood, etc., as specified and designed by the architect. All tops can be equipped with Deal Plates.

Superstructures can be the low-vision "friendly" style, or the "grille" style for greater hold-up protection. Either can be used with Shaw-Walker standard counter or custom-built architect-designed counter enclosures.

Fireproof Equipment for Savings Ledgers is "movable furniture" but often specified by architect. We make three models of fireproof savings desks. Also point-of-use insulated fireproof desks, ledger trays and files for every bank department—46 stock models, described in our 244-page catalog.

Consultation Service for Architects

Competent Shaw-Walker representatives with down-to-earth experience will welcome the architect's request for planning assistance, estimates for budget allowance, etc. Each Shaw-Walker representative has behind him our national staff . . . 60 years' experience in effecting time- and space-economies in financial institutions of every size. Branches and dealers in 485 cities throughout the United States and Canada.

The above illustration shows the recommended and most used arrangement of Shaw-Walker units for Savings Tellers, as illustrated with architect-designed counter enclosure at the left.
